

# SAGA-Python

A Light-Weight Python Access Layer for  
Distributed Computing Infrastructure

<http://saga-project.github.io/saga-python>

# OVERVIEW

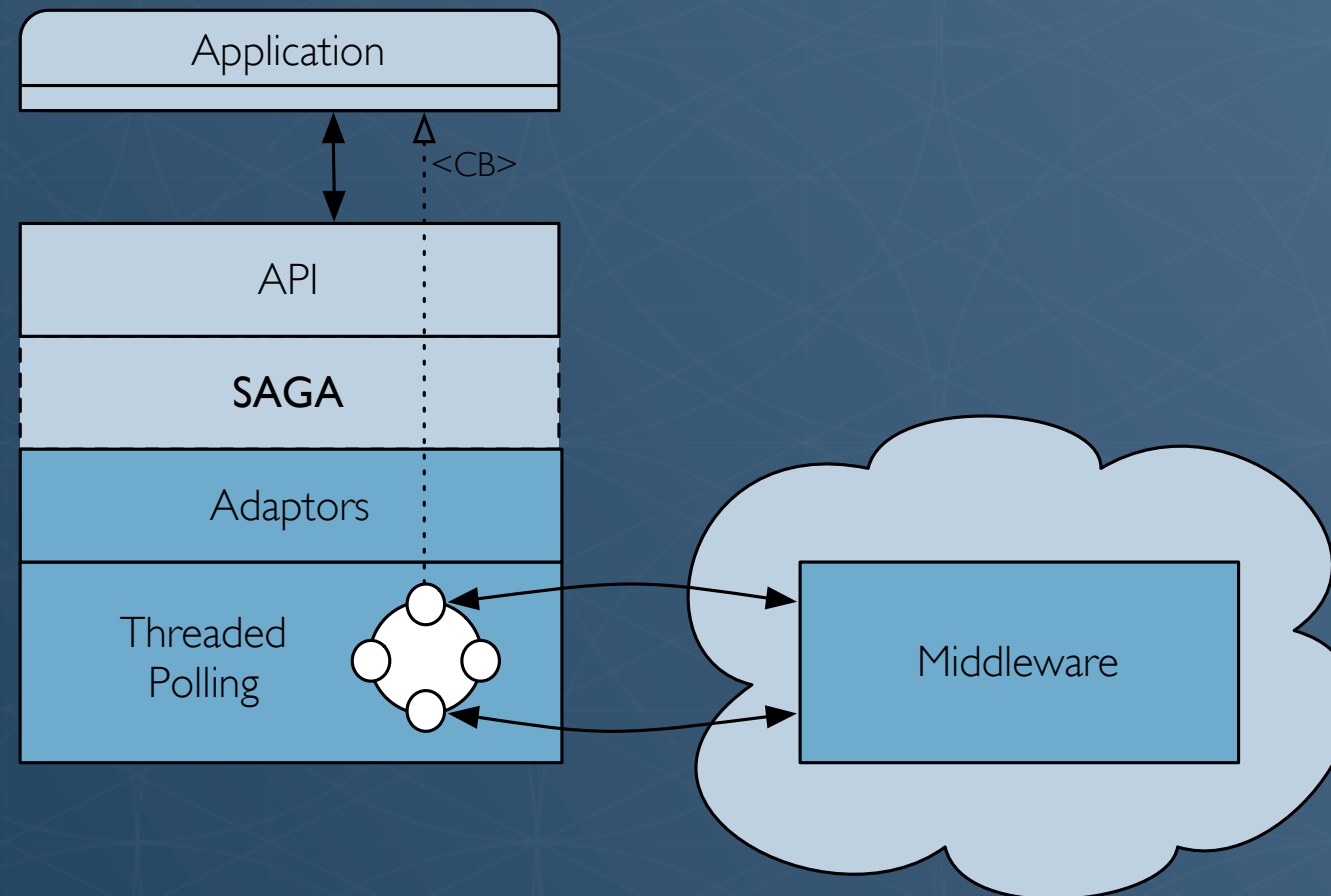

# TRANSPARENT REMOTE OPERATIONS

- Fast and optimized (GSI-)SSH command transport wrapper can be used by adaptors to access otherwise 'local-only' services, like many queuing systems

# TRANSPARENT CALLBACKS

- Callbacks and asynchronous operations are important concepts in distributed applications but are not supported by all middleware systems
- SAGA-Python moves application-level polling into the adaptor layer and exposes a clean callback interface through the API

# AVAILABLE ADAPTORS

- Job Submission Systems
  - SSH, GSISSH, Condor, Condor-G, PBS(-Pro), TORQUE, SGE, SLURM. Under development: LSF
- File / Data Management
  - SFTP, GSIFTP, HTTP, HTTPS. Under development: iRODS, Globus Online
- Resource Management / Clouds
  - Amazon EC2, Openstack ('libcloud'-based)
